

Panorama Antennas' new range of 3G antennas expands the potential of cellular data transfer.

Panorama Antennas' new range of 3G antennas expands the potential of cellular data transfer.

Panorama Antennas this week announced the launch of a revolutionary new range of antennas designed to improve signal strength and transfer speeds for 3G datacards and modems. These global products cover all the cellular bands on which 2G and 3G data services operate and provide a cheap and easy way for users to radically improve their signal strength and transfer speeds.

Recent months have seen huge data tariff cuts by mobile service providers combined with a rapid increase in advertised data rates. The arrival of a new generation of 3G modems capable of speeds up to 7.2 Mbps has demonstrated that mobile broadband is capable of standing toe-to-toe with fixed line ADSL connections. The key obstacle which currently stands in the way of the mass adoption of 3G broadband is the inconsistent data rates that users experience due to network coverage gaps. The new T-Clip range of combined 3G and 2G datacard antennas have been designed to ensure that users can benefit from improved signal strength and data transfer rates when using their 3G datacard modems.

The products have been designed to provide a single global solution in terms of frequency coverage and usability. The TCLIP2 is supplied with both a desk stand and a revolutionary screen clip which enables users to either mount the antenna on their desk or clip it to their laptop screen. This screen clip combined with the products low weight and discreet form makes it the ideal solution for those looking to maintain great datarates while travelling on business. Furthermore Panorama Antennas has researched the 3G data card market to ensure that the TCLIP2 range provides compatible connectors for all major datacards available today.

“ We are very excited about the new TCLIP2. It's a truly consumer friendly product combining for the first time a screen clip and desk mount antenna giving users complete flexibility. In addition the multiband 3G and GPRS coverage offered by the TCLIP2 will provide truly global appeal. Cellular data coverage no longer has to be a limiting factor in doing business freely at home or abroad. ”

Christopher Jesman, Managing Director, Panorama Antennas Limited

For additional information on the new TCLIP2 or to order samples, call Panorama Antennas or visit <http://www.panorama-antennas.com>. The new TCLIP2 is available globally from 30.05.2008.

About Panorama Antennas Ltd:

Panorama Antennas, a family business now in its 3rd generation, is a leading design and manufacturer of antennas for radio communications. Established in London in 1947, Panorama started life as a company manufacturing consumer products. By 1952, buoyed by huge demand for TV's in the UK, Panorama moved into the manufacturing of components for televisions including antennas.

Today, Panorama is a major producer of antennas for telecommunications and electronics companies around the world, employs over 50 persons and has 8 overseas sales offices.
